

KVK FE DEPLOYMENT PLAN

Here's how I think we should set up FE.

Instead of spreading our strongest KDs everywhere, I think we should stack our top 4 KDs in Center and use the other groups to control the sides.

The main idea is simple: hit Water hard in Center, keep Wind busy on the flank, and keep 3909 + 3924 flexible as our reserves.

CENTER

- Fire Center: 3925 + 3928
- Earth Center: 3907 + 3903
- These are our 4 strongest FE KDs, so I'd rather stack them in Center instead of spreading them out.
- The goal is to link Fire + Earth as fast as possible and then put heavy pressure on Water.

CENTER VS WATER

Active Power: 24.60B vs 20.64B (+19.19%)

Active Troop Power: 4.85B vs 4.36B (+11.22%)

Active T5P Power: 15.67B vs 13.81B (+13.41%)

Active T5P Troop Power: 3.44B vs 3.18B (+8.18%)

That's a solid advantage, so Center should be where we put the most pressure.

FLANK

- 3914 + 3917
- Their main job is to keep 3916 Wind under control.
- We have a pretty solid advantage here, so we should be able to pressure them without committing everything.

FLANK VS 3916

Active Power: +56.65%

Active Troop Power: +57.67%

Active T5P Power: +32.57%

Active T5P Troop Power: +35.23%

RESERVES

- Earth Reserve: 3909
- Fire Reserve: 3924
- 3909 + 3924 should stay flexible and act as backup for the flank or Fire if Water starts pushing hard.
- 3924 will build the Fortress around Earth Z6.
- 3909 will build the Fortress around Fire Z6.

- Neither reserve should get locked into one side. Depending on the battlefield, they can rotate to whichever area needs help.

FORTRESS + FLAG SETUP

Fire flank + 3924 will build a Fortress around Z6 Earth, then coordinate with 3917 to push flags toward 3916.

At the same time, we should finish the Fire flag network in our own area.

Earth reserve 3909 will build a Fortress in Fire Zone 6 as backup for Fire.

If Water starts pushing hard and gets through faster than expected, 3909 + 3924 can rotate over and help stabilize Fire or the flank instead of letting that side collapse.

The important part is the Water timing.

If Water starts moving faster than Earth and reaches the gap before our Center groups connect, don't let them just run through.

Use the Fire flags we already prepared to funnel Water into the War Flag and slow them down.

The goal isn't necessarily to wipe them there — it's to buy Earth enough time to move up and close the gap.

Once Fire + Earth finally connect in Center, we can stop playing passively and full-send pressure into Water.

BASICALLY

Stack Center → contain Wind → keep 3909 + 3924 flexible → if Water pushes hard, use the reserves to backup Fire or the flank → slow Water → connect Fire + Earth → then hit Water with everything.
